**Acute Blood Purification**-H. Suzuki 2010-05-11 Acute organ damage and the ensuing multiple organ failure are the result of a pathophysiological process involving various cytokines. Once activated, these proteins cannot be eliminated even when the kidneys function at their maximum capacity. To counteract this mechanism, researchers in Japan have developed an innovative concept employing blood purification to remove the overwhelming cytokines. This book describes the use of hemodiafiltration to inhibit the cytokine storms which cause serious organ damage in patients with septic shock. Moreover, the technical construction of the blood purification system, which includes various machines, devices, membranes, fluids, etc., is explained in detail. Finally, leading experts discuss the concept of continuous renal replacement therapy as the standard care in critically ill patients with severe acute kidney injury. Describing the current state of acute blood purification, this publication provides new impulses and opens new avenues in the treatment of acute organ damage.

**Medicine's Dilemmas**-William L. Kissick 1994 Can the United States provide a health care program that offers a comprehensive package of the highest-quality health benefits to all Americans while containing health care costs? In this important book, Dr. William L. Kissick says that it cannot: no society in the world has sufficient resources to provide all the health services its population is capable of utilizing. Dr. Kissick was an active participant in the drafting of Medicare legislation in the 1960s and for the past twenty-five years has held joint positions in a medical school and a business school where he has specialized in health care management. Drawing on his long experience in the field, he discusses the dimensions of the current crisis, the financial and medical implications of alternative proposals--including the program put forth by the Clinton administration--and the requirements for long-term strategies. He argues that although there are no ideal solutions to health care reform, there are many significant programs at the regional, state, and local level that can serve as prototypes for the restructuring of the organization, financing, and delivery of health services. Dr. Kissick discusses some of these alternatives and suggests that after the federal government legislates a health care policy, it should be implemented through collaboration with state and local initiatives, for such programs have been built on an understanding of regional needs, expectations, and cultural diversity.

**Colitis-Associated Cancer**-Masato Kusunoki 2015-10-01 As the number of patients with colitis-associated cancer (CAC) is on the increase, the purpose of this book is to review the latest topics concerning management of the disease. In recent years, the diagnostic power of endoscopy and molecular pathology has also grown tremendously, as a result of which they now have a far greater influence on the treatment of CAC. At the moment, appropriate monitoring programs for ulcerative colitis and Crohn's disease remain uncertain. At the same time, the latest findings on DNA methylation and microRNAs hold the promise of making revolutionary changes in these areas. Moreover, recent drug advances in the treatment of inflammatory bowel diseases have changed surgical indications. On the other hand, the indication of mucosectomy on colorectal cancer in ulcerative colitis and prophylactic abdominoperineal resection for Crohn's disease remain controversial. This book provides the latest information on the remaining issues of CAC from the point of view of expert surgeons.

**Technology transfer at the National Institutes of Health.-**

**Circle of Impact**-Dr. Ed Brenegar 2018-09-18 We are in an unprecedented transition in human history. The way societies and organizations have developed over the past two millennia has run its course. With the advent of the digital age, we have the tools, knowledge, and resources to act upon our desires to create, innovate, and collaborate in ways not available to anyone—before now. Transformation has everything to do with how we give of ourselves to one another and the difference that makes. It is about how we live together, work together, change together, and lead together. Part of this transition is the transformation of human purpose. Do we define ourselves by the roles that we serve in institutions? Or, do we define ourselves by the impact we seek to create? Your personal circle of impact is not about what you want to have, but what we can create—together.

**Intravoxel Incoherent Motion (IVIM) MRI**-Denis Le Bihan 2018-11-05 Intravoxel incoherent motion (IVIM) refers to translational movements which within a given voxel and during the measurement time present a distribution of speeds in orientation and/or amplitude. The concept was introduced in 1986 together with the foundation of diffusion MRI because it had been realized that flow of blood in capillaries (perfusion) would mimic a diffusion process and impact diffusion MRI measurements. IVIM-based perfusion MRI, which does not require injection of any tracer or contrast agent, has been first investigated in the brain, but is now experiencing a remarkable revival for applications throughout the body, especially for oncologic applications, from diagnosis to treatment monitoring. This book addresses a number of highly topical aspects of the field from leading authorities, introducing the concepts behind IVIM MRI, outlining related methodological issues, and summarizing its current usage and potential for clinical applications. It also presents future research directions, both in terms of methodological development and clinical application fields, extending to new, non-perfusion applications of IVIM MRI, such as virtual MR elastography.

**Leksell Radiosurgery**-A. Niranjana 2019-05-20 Since its introduction 52 years ago, Leksell radiosurgery has become a widely applied technique for the management of a diverse group of vascular, neoplastic, and functional disorders. This publication presents an update on state-of-the-art radiosurgery technology, including outcomes, by

the pioneers in the field. Experts have contributed chapters on various topics. They provide a history of the development of Leksell Gamma Knife and its evolution from frame-based to the inclusion of mask-based radiosurgery in the latest Gamma Knife model. For beginners, there is valuable information related to imaging, quality assurance, patient care, anesthesia, and regulatory requirements. Advance users will appreciate the summary of the long-term outcome of important indications. Additional chapters on cavernous malformation, orbital, uveal, and ocular disorders clarify the role of radiosurgery. This book is a concise overview for physicians interested in radiosurgery. **Goodman's Neurosurgery Oral Board Review**-Allan D. Levi 2016-10-18 This book will educate and prepare neurosurgery candidates who are preparing for the Neurosurgery Oral Board exam, the final step prior to board certification. It will also serve as a primer for the Goodman oral board course, a bi-annual course sponsored by the AANS. The book begins by initially describing the format of the oral board exam in the US. It then examines some of the concepts and techniques in the question-answer process that forms the major premise of the oral board exam. Each chapter contains 4-5 case presentations, which are organized similarly to how oral board questions are presented, with a brief history / physical and relevant imaging studies. The authors provide detailed analysis of these cases, as well as key references for each case with the salient conclusions from each referenced paper. While there are a few books that cover the board exams, none of them are specifically designed as case-based resources for oral board exam preparation. Goodman's Neurosurgery Oral Board Review focuses specifically on the oral board exam. Its primary intended audience is US, Canadian and British neurosurgeons who are preparing for the oral board, but it will also be a very appropriate resource for those who are trying to maintain competence in neurosurgery. Dr. Levi's edited text is authored by a group of long-standing, dedicated members to the course who have taught it for the last 15 years. With their extensive experience in teaching for the board exams, the skillset they bring to this book is unrivaled.
