Invisible Founders-Lynn Rainville 2019-06-14

Literal and metaphorical excavations at Sweet Briar College reveal how African American labor enabled the transformation of Sweet Briar Plantation into a private women's college in 1906. This volume tells the story of the invisible founders of a college founded by and for white women. Despite being built and maintained by African American families, the college did not integrate its student body for sixty years after it opened. In the process, Invisible Founders challenges our ideas of what a college "founder" is, restoring African American narratives to their deserved and central place in the story of a single institution — one that serves as a microcosm of the American South.

Fundamentals of Space Systems-Vincent L. Pisacane 2005 Fundamentals of Space Systems was developed to satisfy two objectives: the first is to provide a text suitable for use in an advanced undergraduate or beginning graduate course in both space systems engineering and space system design. The second is to be a primer and reference book for space professionals wishing to broaden their capabilities to develop, manage the development, or operate space systems. The authors of the individual chapters are practicing engineers that have had extensive experience in developing sophisticated experimental and operational spacecraft systems in addition to having experience teaching the subject material. The text presents the fundamentals of all the subsystems of a spacecraft missions and includes illustrative examples drawn from actual experience to enhance the learning experience. It

includes a chapter on each of the relevant major disciplines and subsystems including space systems engineering, space environment, astrodynamics, propulsion and flight mechanics, attitude determination and control, power systems, thermal control, configuration management and structures, communications, command and telemetry, data processing, embedded flight software, survivability and reliability, integration and test, mission operations, and the initial conceptual design of a typical small spacecraft mission.

Rivals Unto Death-Rick Beyer 2017-02-21 From the bestselling author of The Greatest Stories Never Told series, the epic history of Alexander Hamilton and Aaron Burr's illustrious and eccentric political careers and their fateful rivalry. The famous duel between Alexander Hamilton and Aaron Burr was the culmination of a story three decades in the making. Rivals unto Death vividly traces their rivalry back to the earliest days of the American Revolution, when Hamilton and Burr--both brilliant, restless, and barely twenty years old--elbowed their way onto the staff of General George Washington. The fast-moving account traces their intricate tug-of-war, uncovering surprising details that led to their deadly encounter through battlefields, courtrooms, bedrooms, and the wildest presidential election in history, counting down the years to their fateful rendezvous on the dueling ground. This is politics made personal: shrill accusations, bruising collisions, and a parade of flesh and blood founders struggling--and often failing--to keep their tempers and jealousies in check. Smoldering in the background was a fundamental political divide that threatened to tear the new nation in two, and still persists to this day. The Burr and Hamilton that leap out of these pages are passionate, engaging, and utterly human characters inextricably linked together as Rivals unto Death.

Applied Digital Signal Processing-Dimitris G. Manolakis 2011-11-21 Master the basic concepts and methodologies of digital signal processing with this systematic introduction, without the need for an extensive mathematical background. The authors lead the reader through the fundamental mathematical principles underlying the operation of key signal processing techniques, providing simple arguments and cases rather than detailed general proofs. Coverage of practical implementation, discussion of the limitations of particular methods and plentiful MATLAB illustrations allow readers to better connect theory and practice. A focus on algorithms that are of theoretical importance or useful in real-world applications ensures that students cover material relevant to engineering practice, and equips students and practitioners alike with the basic principles necessary to apply DSP techniques to a variety of applications. Chapters include worked examples, problems and computer experiments, helping students to absorb the material they have just read. Lecture slides for all figures and solutions to the numerous problems are available to instructors.

Behind Closed Doors-Jenny Tomlin 2006 Jenny grew up in a house where no-one was safe. Born one of five children in the East End, her childhood was spent in squalor and terror. Her father's violent beatings, humiliations, and sexual abuse were part of daily life; her mother - also his sexual victim and savagely beaten - was no source of help. Deprived of love and all comforts, the children would turn to each other for support and to the only adult they could trust, Auntie. This is the story of how Jenny, her sister Kim and brother Laurence, not only survived but ultimately transcended the unimaginable degradations heaped on them. With the power of love, cunning, the blackest of black humour and an indestructible self-belief, Jenny eventually broke free of her past.

Invent Your Own Computer Games with Python, 4th Edition-Al Sweigart 2017-01-10

Invent Your Own Computer Games with Python will teach you how to make computer games using the popular Python programming language—even if you've never programmed before! Begin by building classic games like Hangman, Guess the Number, and Tic-Tac-Toe, and then work your way up to more advanced games, like a text-based treasure hunting game and an animated collision-dodging game with sound effects. Along the way, you'll learn key programming and math concepts that will help you take your game programming to the next level. Learn how to:

- *Combine loops, variables, and flow control statements into real working programs
- *Choose the right data structures for the job, such as lists, dictionaries, and tuples
- *Add graphics and animation to your games with the pygame module
- *Handle keyboard and mouse input
- *Program simple artificial intelligence so you can play against the computer
- *Use cryptography to convert text messages into secret code
- *Debug your programs and find

common errors As you work through each game, you'll build a solid foundation in Python and an understanding of computer science fundamentals. What new game will you create with the power of Python? The projects in this book are compatible with Python 3.

Electric Power Systems-Ned Mohan

2012-01-18 Author Ned Mohan has been a leader in EES education and research for decades. His three-book series on Power Electronics focuses on three essential topics in the power sequence based on applications relevant to this age of sustainable energy such as wind turbines and hybrid electric vehicles. The three topics include power electronics, power systems and electric machines. Key features in the first Edition build on Mohan's successful MNPERE texts; his systems approach which puts dry technical detail in the context of applications; and substantial pedagogical support including PPT's, video clips, animations, clicker questions and a lab manual. It follows a top-down systems-level approach to power electronics to highlight interrelationships between these sub-fields. It's intended to cover fundamental and practical design. This book also follows a building-block approach to power electronics that allows an in-depth discussion of several important topics that are usually left. Topics are carefully sequenced to maintain continuity and interest.

Public Policy Making-Larry N. Gerston

2015-05-18 This brief text identifies the issues, resources, actors, and institutions involved in public policy making and traces the dynamics of the policymaking process, including the triggering of issue awareness, the emergence of an issue on the public agenda, the formation of a policy commitment, and the implementation process that translates policy into practice. Throughout the text, which has been revised and updated, Gerston brings his analysis to life with abundant examples from the most recent and emblematic cases of public policy making. At the same time, with well-chosen references, he

places policy analysis in the context of political science and deftly orients readers to the classics of public policy studies. Each chapter ends with discussion questions and suggestions for further reading.

The Ruins of Us-Keija Parssinen 2012-01-17
Saudi-born author Keija Parssinen's stunning debut offers the intricate, emotionally resonant story of an American expatriate who discovers that her husband, a Saudi billionaire, has taken a second bride—an emotionally turbulent revelation that blinds them both to their teenaged son's ominous first steps down the road of radicalization. Readers of *The Septembers of Shiraz* will be captivated by Parssinen's story of love and betrayal, fundamentalism, family and country in the Middle East. Anthony Swofford, author of *Jarhead*, hails Parssinen's characters as "richly conceived, and her evocative petrol universe of wealth, privilege, and intrigue is unforgettable," characterizing *The Ruins of Us* as having "powerful storytelling that is refreshing and entertaining."
