Mood, Aspect, Modality Revisited-Joanna Blaszczak 2017-01-12 Over the past several decades, linguistic theorizing of tense, aspect, and mood (TAM), along with a strongly growing body of crosslinguistic studies, has revealed complexity in the data that challenges traditional distinctions and treatments of these categories. Mood, Aspect, Modality Revisited argues that it's time to revisit our conventional assumptions and reconsider our foundational questions: What exactly is a linguistic category? What kinds of categories do labels such as "subjunctive," "imperative," "future," and "modality" truly refer to? In short, how categorical are categories? Current literature assumes a straightforward link between grammatical category and semantic function, and descriptions of well-studied languages have cultivated a sense of predictability in patterns over time. As the editors and contributors of Mood, Aspect, Modality Revisited prove, however, this predictability and stability vanish in the study of lesser-known patterns and languages. The ten provocative essays gathered here present fascinating cutting-edge research demonstrating that the traditional grammatical distinctions are ultimately fluid—and perhaps even illusory. Developing groundbreaking and highly original theories, the contributors in this volume seek to unravel more general, fundamental principles of TAM that can help us better understand the nature of linguistic representations.

Learning from Las Vegas-Robert Venturi 2017 Upon its publication by the MIT Press in 1972, Learning from Las Vegas was immediately influential and controversial. The authors made an argument that was revolutionary for its time -- that the billboards and casinos of Las Vegas were worthy of architectural attention -- and offered a challenge for contemporary architects obsessed with the heroic and monumental. The physical book itself, designed by MIT's iconic designer Muriel Cooper, was hailed as a masterpiece of modernist design, but the book's design struck the authors as too monumental for a text that praised the ugly and ordinary over the heroic and monumental. The MIT Press published a revised version in 1977 -- a modest paperback that the authors felt was more in keeping with the argument of the book -- and the original Cooper-designed book fell out of print and became a highly sought-after collectors' item; it now sells for thousands of dollars in the rare book market, while the author-redesigned paperback has remained continuously in print at a price affordable to students. Now, decades after the original hardcover edition sold out, the MIT Press is publishing a facsimile edition of the original large-format Cooper-designed edition of Learning from Las Vegas, complete with translucent glassine wrap. This edition also features a spirited preface by Denise Scott Brown, looking back on the creation of the book and explaining her and Robert Venturi's reservations about the original design. Learning from Las Vegas begins with the Las Vegas Strip and proceeds to "Ugly and Ordinary Architecture, or the Decorated Shed," on symbolism in architecture and the iconography of urban sprawl. As Scott Brown says in her introduction, the book "upended sacred cows would not bad-mouth bad taste, and redefined architectural research.".

Barefoot-Hearted-Kathleen Meyer 2002-02-26 "The Wyoming Centennial Wagon Train ended in Cody in a dismal, torn-down drive-in movie theater. Before setting up the corral, we were forced to clear away shards of glass, bent nails, broken lumber. My prairie skirt and petticoats hung ragged and clay-caked, and under a droopy Stetson my frizzled hair appeared at once greased and starched beyond human recognition. A cloud, a sort of vaporousness, redolent with fresh acrid sweat on top of powerful stale sweat, hung thickly about me. Laced, as it was, with a woman's sweet musky secretions, and all gone past ripe, oddly it was a pungency I savored. Such goaty piquance, though, was cause to be shunned in any town setting. The look of my world had changed. Gone were the high-dollar designer clothes and the zipping around fabled Marin County in a candy-apple-red 1966 Mustang convertible. It was true that I unfailingly sought the ironies in life and, with a kind of dual personality, shifted easily through incongruencies such as town strolls in high heels and backcountry hiking in bare feet; the bucket seats of a classic automobile and the broken-down bench of a beater truck. It was only during the years that Iíd worn white overalls, taped drywall, and come home every night much like Charles Schulz's Pig Pen, flaking a cloud of dried white mud bits onto the rug, that I'd felt moved to keep my fingernails painted red. Now I was to slip farther than ever planned toward one end of my seesaw and then, incredibly, by conscious design, inch out even farther." --from Barefoot-Hearted With more than 1.5 million copies in print, Kathleen Meyer's groundbreaking international bestseller, How to Shit in the Woods: An Environmentally Sound Approach to a Lost Art, has been widely embraced by the outdoor community and has found its way into myriad places: national parks, outdoor leadership schools and scout-troop headquarters, the camp tents of those who have discovered that it is amusing out-loud reading, and the bathroom-literature baskets of households around the world. Now, from the Rocky Mountain West, Meyer brings

us Barefoot-Hearted: A Wild Life Among Wildlife, a coming-into-the-country story told with the frank, dry humor and sharp research of her first book. The country, in this case, is Montana's tall, reaching landscape with its ever underfoot wild critters; the on-tenterhooks territory of a new romantic relationship; and the pressure cooker that is our precarious global imbalance. Meyer finds herself in midlife standing out under yawning skies, surrounded by sagebrush and cactus, having fallen for the Irish charm of itinerant farrier Patrick McCarron. As partners, they travel across three mountain states with draft horses and a covered wagon and then set up housekeeping in a seventy-five-year-old dairy barn. In this primitive structure, the author rapidly discovers she's living with troops of mice, a nursery colony of seventy-five bats, sexually fired-up skunks, and more flies than in a pig shed. She tells of a freakish season that or-phaned seventy-seven bear cubs, an unusual fly-fishing trip on a famed blue-ribbon trout stream, the visitations of moose, and the discovery of a den of wolves. Meyer's prose is original and inspired, playful yet provocative. She carries us vividly back to the settlers' old West while pondering modern-day dilemmas, those of fitting into this fast hurtling world, of determining amid the earth's rising extinctions of species, whose planet it is, and of managing to stay empowered residing with a man who "stands six feet six and beats steel on an anvil for a living." A personal chronicle of conscience and a love story of rare and quirky dimension, Barefoot-Hearted catapults readers into new realms of thought, deftly guided there by Meyer's sense of the ironic, the randy, and the humorous.

30 Days of Night: Rumors of the Undead-Steve Niles 2006-03-08 In a sleepy, secluded Alaska town called Barrow, the sun sets and doesn't rise for more than thirty consecutive days and nights from November to December. During this time a few years ago, from the darkness and across the frozen wasteland, an evil that normally preferred to exist in the shadows descended upon Barrow and brought the residents to their knees. Barrow's only hope was Eben and Stella Olemaun, a husband-and-wife law enforcement team who were torn between their own survival and saving the town they loved. Months later, as Stella Olemaun attempts to warn the world about the looming vampire threat by any means necessary, a rogue government agent may be taking more than an active interest in her story. And meanwhile, further north, a new sheriff and his young son must solve the lingering mystery of Barrow, even as the survivors of the original attack prepare for the sun to set once again -- however this time, they're ready. 30 Days Of Night: Rumors Of The Undead is Steve Niles's innovative and eagerly anticipated expansion of a nightmarish narrative that explores the nature of ancient evil existing -- and thriving -- in an unsuspecting modern world.

As noblewomen young and old perish mysteriously, the king's nephew — his sister's only child — grows toward manhood. But unbeknownst to the king or the boy, strange, haunted Tobin is the princess's daughter, given male form by a dark magic to protect her until she can claim her rightful destiny. Tupolev Tu-16 Badger-Yefim Gordon 2004-06-21 The establishment of NATO posed the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics and systems. The Tu-16 even found civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West. Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967. Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.

Lovecraft Unbound-Ellen Datlow 2009 The stories are legendary, the characters unforgettable, the world horrible and disturbing. Howard Phillips Lovecraft may have been a writer for only a short time, but the creations he left behind after his death in 1937 have shaped modern horror more than any other author in the last two centuries: the shambling god Cthulhu, and the other deities of the Elder Things, the Outer Gods, and the Great Old Ones, and Herbert West, Reanimator, a doctor who unlocked the secrets of life and death at a terrible cost. In Lovecraft Unbound, more than twenty of today's most prominent writers of literature and dark fantasy tell stories set in or inspired by the works of H. P. Lovecraft.

Handbook of the Cultural Foundations of Learning-Na'ilah Suad Nasir 2020-05-01 Edited by a diverse group of expert collaborators, the Handbook of the Cultural Foundations of Learning is a landmark volume that brings together cutting-edge research examining learning as entailing inherently cultural processes. Conceptualizing culture as both a set of social practices and connected to learner identities, the chapters synthesize contemporary research in elaborating a new vision of the cultural nature of learning, moving beyond summary to reshape the field toward studies that situate culture in the learning sciences alongside equity of educational processes and outcomes. With the recent increased focus on culture and equity within the educational research community, this volume presents a comprehensive, innovative treatment of what has become one of the field's most timely and relevant topics.

Finite Automata and Regular Expressions-Stefan Hollos 2013-08 This is a book about solving problems related to automata and regular expressions. It helps you learn the subject in the most effective way possible, through problem solving. There are 84 problems with solutions. The introduction provides some background information on automata, regular expressions, and generating functions. The inclusion of generating functions is one of the unique features of this book. Few computer science books cover the topic of generating functions for automata and there are only a handful of combinatorics books that mention it. This is unfortunate since we believe the connection between computer science and combinatorics, that is opened up by these generating functions, can enrich both subjects and lead to new methods and applications. We cover a few interesting classes of problems for finite state automata and then show some examples of infinite state automata and recursive regular expressions. The final problem in the book involves constructing a recursive regular expression for matching regular expressions. This book explains: * Why automata are important. * The relationship of automata to regular expressions. * The difference between deterministic and nondeterministic automata. * How to get the regular expression from an automaton. * Why two seemingly different regular expressions can belong to the same automaton. * How the regular expression for an infinite automaton is different than one for a finite one. * The relationship of a regular expression to a regular language. * What a generating function for a language tells you about the language. * How to get a generating function from a regular expression. * How the generating function of a recursive regular expression is different from that of an ordinary regular expression. * How to test divisibility properties of integers (binary and decimal based) using automata. * How to construct an automaton to search for a given pattern, or for a given pattern not occurring. * How to construct an automaton for arbitrary patterns and alphabets. * How the recursive regular expression for nested parentheses leads to the Catalan numbers. Included in this book: * Divisibility problems in binary and decimal. * Pattern search problems in binary, ternary, and quaternary alphabets. * Pattern search problems for circular strings that contain or do not contain a given pattern. * Automata, regular expressions, and generating functions for gambling games. * Automata and generating functions for finite and infinite correctly nested parentheses. * The recursive regular expression for matching regular expressions over a binary alphabet. * A further reading list.

The Somnambulist-Jonathan Barnes 2009-01-06 Once the toast of good society in Victoria's England, the extraordinary conjurer Edward Moon no longer commands the respect that he did in earlier times. Still, each night he returns to the stage of his theater to amaze his devoted, albeit dwindling, audience, aided by his partner, the Somnambulist—a silent, hairless, hulking giant who, when stabbed, does not bleed. But these are strange, strange times in England, with the oddest of sorts prowling London's dank underbelly. And the very bizarre death of a disreputable actor has compelled a baffled police constabulary to turn once again to Edward Moon for help—inevitably setting in motion events that will shatter his increasingly tenuous grasp on reality.
